IN THE CLAIMS:

Please amend claims 19-34 as indicated below (see marked-up copy attached hereto).

19. (Amended) A method for diagnosing a tumor or disease characterized by vascular proliferation, comprising administering to a patient in need of such diagnosis an antibody with specific, high affinity for the ED-B domain of fibronectin.

20. (Amended) A conjugate comprising an antibody with a specific, high affinity for the ED-B domain of fibronectin and a molecule which induces blood coagulation and/or blood vessel occlusion.

21. (Amended) A conjugate according to claim 20 wherein the molecule which induces blood coagulation and/or blood vessel occlusion is a photoactive molecule.

22. (Amended) A conjugate according to claim 21 wherein the photoactive molecule is a photosensitizer.

23. (Amended) A conjugate according to claim 22 wherein the photosensitizer absorbs at a wavelength above 600 nm.

24. (Amended) A conjugate according to claim 22 wherein the photosensitizer is a tin (IV) chlorine e₆ molecule.

25. (Amended) A conjugate according to claim 20 wherein the molecule which induces blood coagulation and/or blood vessel occlusion is a radionuclide.

26. (Amended) A conjugate according to claim 25 wherein the radionuclide is an α - or β - emitting radionuclide.
